Prioritize Tables for Pricing and Discount Review

Tables has the lowest profit margin (**−8.46%**), largest dollar loss (**−$16,937.44**), and third-highest average discount (**26.23%**) among all 17 product subcategories.

Profit margin enables consistent profitability comparisons across subcategories of different sales sizes. 5 of 17 subcategories are shown to highlight the transition from positive to negative profitability.

The Profitability Gap: 5.53 Percentage Points

Tables' −8.46% profit margin is 5.53 percentage points below Bookcases (−2.93%), the next-lowest subcategory, demonstrating the extent of Tables' underperformance relative to other unprofitable product lines.

The Discount Gap: 10.56 Percentage Points

Tables averages a **26.23% discount**, compared with the **15.67% average discount across all orders**, suggesting that heavier discounting may be contributing to its poor profitability.

Recommended Action: Reevaluate Tables Discounts

Prioritize Tables for pricing and discount review, considering reductions to its 26.23% average discount toward the 15.67% overall average. Evaluate the impact on sales and profitability, and **consider discontinuation** if these adjustments fail to produce meaningful improvement.
